RUSH Sequence Search Request 09/972,916

I would like to request a RUSH sequence search because this case is an after final amended case that was forwarded to me 8/29/2005.

If approved, please forward the request to STIC and CC a copy to me, THANKS!

SEARCH REQUEST FORM

Scientific and Technical Information Center

Examiner#: 78697 Art Unit: 1635

Phone Number: 571-272-0756

Date: 8/30/2005

Serial Number: 09/972,916 (THULE et al.)

Mailbox & Bldg/Room Location: REMSEN 2C18

Results Format Preferred (circle): Paper

I would like to have a standard search of the nucleic acid databases including the pending applications databases (i.e., an interference search) performed using the following SEQ. ID NOs. from application: 09/972,916

SEQ ID NO: 1 (nucleic acid 51 nucleotides in length)

SEQ ID NO: 2 (nucleic acid 219 nucleotides in length)

SEQ ID NO: 3 (nucleic acid 270 nucleotides in length)

SEQ ID NO: 4 (nucleic acid 321 nucleotides in length) SEQ ID NO: 5 (nucleic acid 372 nucleotides in length) SEQ ID NO: 6 (nucleic acid 423 nucleotides in length)

Please note that the above sequence are gene expression regulatory sequences and the claims encompass nucleic acid sequences comprising any 1 or more of the above sequences.

The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene promoter and an insulin-sensitive element (ISE) of an insulin-like growth

New insulin regulator cassette, useful e.g. for treating diabetes, provides specific, glucose-inducible transgenic expression of insulin liver cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               to treat or prevent diabetic complications, to regulate insulin
production, to modulate hyperglycaemia (without severe hypoglycaemia), to
cincrease fat catabolism and to retard protein catabolism. The construct
provides stimulation of insulin expression by glucose (but not other
carbohydrates) and glucocorticoids and inhibition by glucagon so that a
combination of these effects can maintain nearly euglycaemic conditions
cin diabetics during short-term fasting, large carbohydrate loads or when
cfed ad libitum and prevent pathological ketogenesis and ketoacidosis,
thus inhibiting the long-term complications of diabetes. The properties
cof the construct are essentially specific for hepatocytes and well-
cinhibition of cellular protein degradation, and inhibition, or
constructed the patoma lines and insulin expression in these cells may
chave effects additional to those provided by secreted insulin, e.g.
constituent of cellular protein degradation, and inhibition, or
constructed insulin-sensitive element of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

The invention relates to an insulin regulator construct comprising a CC glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene CC promoter and an insulin-sessitive element (ISE) of an insulin-like growth CC factor binding protein-1 (IGFBP-1) basal promoter. The construct is used CC to treat or prevent diabetic complications, to regulate insulin CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to CC increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly suglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when CC fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties CC differentiated hepatoma lines and insulin expression in these cells may CC inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence
                                       innibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence represents a rat insulin regulator construct of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 9; Page 13-14; 37pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New insulin regulator cassette, useful e.g. for treating diabetes, provides specific, glucose-inducible transgenic expression of insulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2002-674190/72

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         factor binding protein-1 (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may and effects additional to those provided by secreted insulin, e.g. stimulation of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence represents a rat insulin regulator construct of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an insulin regulator construct comprising a CC glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-1 (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin (CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to cincrease fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions (combination of these effects can maintain nearly euglycaemic conditions (combination of these effects can maintain nearly euglycaemic conditions (combination of these effects can maintain nearly euglycaemic conditions (combination of the long-term complications of diabetes. The properties conditions inhibiting the long-term complications of diabetes. The properties conditions inhibition of cellular protein degradation, and inhibition, or inhibition of cellular protein degradation, and inhibition, or these catabonial to those provided by secreted insulin, e.g. catabonial to the catabonial to the

                                                                                                                                                                                                                                                     to treat or prevent diabetic complications, to regulate insuling production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene promoter and an insulin-sensitive element (ISE) of an insulin-like growth factor binding protein-1 (IGFBP-1) basal promoter. The construct is used
                                                                                                                                                                                                     Sequence 423 BP; 81 A; 149 C; 116 G; 77 T; 0 U; 0 Other;

cells. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the hepatotoxicity of a compound, comprising detecting the level of expression in a tissue or cell sample exposed to the compound of two or more genes listed in the specification, where differential expression of the genes is indicative of at least one toxic effect or progression. The method can also be used to identify an agent which modulates the toxic response and predict cellular pathways that a compound modulates in a cell. The methods utilise a set of at least two probes (on a solid support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer system comprising a database containing information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a set of genes comprising at least two genes listed in the specification,
                                                                                                                                                                                                                                                     compounds or the progression of these global changes in gene expression in t
                                                                                                                                                                                                                                                                                                                                                                     Predicting toxic effects of compounds or the progression of these toxic effects by determining the changes in gene expression in tissues or cell exposed to the toxin and comparing these to gene expression in unexposed
                                                                                                                                                                                                                                     The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the global changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or

The method is useful for elucidating global changes in gene expression and for identifying toxicity markers in tissues or cell exposed to a known toxin. The genes may be used as toxicity markers in drug screening and toxicity assays. The genes and gene expression information may be used as diagnostic markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound or agent. Hepatotoxicity is characterised by centrilobular necrosis and steatosis. The present sequence is an expressed sequence tag (EST) or cDNA derived from a gene which is differentially expressed in response to a hepatotoxic agent
The present invention relates to a method for predicting a toxic effect of a compound. The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising SEQ ID 1-4925, where differential expression of the gene indicates at least one toxic effect. The method is useful for predicting at least one toxic effect of a
                                                                                                                                                                                                              predicting a toxic effect of a compound, useful in identifying toxicity markers in liver tissues or cells for drug screening and toxicity assays, comprises preparing gene expression profile of tissue or cells exposed to
                                                                                                                                                                                                                                                                                                                                              Mendrick D,

The method and compositions of the present invention using a database of genes having liver toxin-induced differential expression, are useful in identifying toxicity markers in liver tissues or cells for drug screening and toxicity assays. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.

                                                                                                               The invention relates to a novel method of predicting at least one toxic CC effect of a compound. The method comprises a gene expression profile of a CC tissue or cell sample exposed to the compound, and comparing the gene CC expression profile to a database compound, and comparing the gene CC information given in the specification. The methods are useful for CC predicting at least one toxic effect of a compound, predicting the CC progression of a toxic effect of a compound, predicting the renal CC conscity of a compound, or identifying toxicity markers in tissues or CC cells exposed to known renal toxin. The genes are useful as toxicity CC markers in drug screening and toxicity assays, in monitoring disease or CC physiological states, or disease progression. This polynucleotide CC represents a rat DNA sequence relating to the toxic effect database CC described in the specification. NOTE: The sequence data for this patent CC did not form part of the printed specification, but was obtained in CC electronic format directly from the World Intellectual Property

The method is useful for predicting (the progression of) at least one toxic effect of a compound. The genes are CC useful as toxicity markers in drug screening and toxicity assays. The CC methods are useful for predicting the likelihood that a compound or test agent will induce various specific kidney pathologies, such as nephritis, CC kidney necrosis, glomerular and tubular injury, or focal segmental CC glomerulosclerosis. The methods are useful for determining the similarity of a toxic response to one or more individual compounds and for CC predicting or elucidating the potential cellular pathways influenced, CC induced or modulated by the compound or test agent. The kit is useful for predicting the progression of renal disease states, for identifying genes CC that show promise as new drug targets and for screening known and newly CC designed drugs. This sequence corresponds to a gene marker used in the CC form part directly from MIPO at fire with was obtained in electronic CC forms and directly from MIPO at fire with was obtained in electronic CC forms the compound of the invention. (Note: The sequence data for this patent did not forms part directly from MIPO at fire with a compound in the compound of the invention.

                                                                              á
                                                                                                                                                                                              The present invention describes a method of screening a test agent for CC hepatotoxicity. The method comprises: (a) providing a test cell copullation comprising a cell capable of expressing one or more nucleic acid sequences selected from the group consisting of RISKMARKER 1-8 and INJURYMARKER 1-10; (b) contacting the test cell population with a test center (c) measuring expression of one or more of the nucleic acid sequences in the test cell population; (d) comparing the expression of the nucleic acid sequence in the test cell population to the expression of the nucleic acid sequence in an reference cell population comprising at least one cell whose exposure status to a hepatotoxic agent in known; and (e) identifying a difference in expression levels of the RISKMARKER cor INJURYMARKER sequences, if present, in the test cell population and reference cell population. The method is useful for identifying a hepatotoxic agent. The present sequence is given in the exemplification of the patotoxic agent. The present sequence is given in the exemplification.
                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel method for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level of expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cyvostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                               Best Local
                                                                                        Query Match
                                                                                                                                     The invention relates to detecting the presence or diagnosing the risk of a liver cancer in a patient. The method involves detecting in a biological sample obtained from the patient aberrant expression of a gene encoding an insulin-like growth factor binding protein (IGBBP). The method is useful for detecting the presence or diagnosing the risk of a liver cancer or for screening agents in a patient. The agent is useful for the manufacture of a medicament for treating and/or preventing liver cancer. The present sequence represents a human IGPBP-1 polypeptide encoding genomic DNA (GenBank Accession No. M74587)
                                                                                                                Sequence 6128

                                                                                        The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2997/c

APPLICANT: Cedars-Sinai Medical Center

APPLICANT: Michel F. Levesque, M.D.

APPLICANT: Michel F. Levesque, M.D.

APPLICANT: TOOMAS Meuman, Ph.D.

TITLE OF INVENTION: CONVERSION OF NON-NEURONAL CELLS INTO

TITLE OF INVENTION: NEURONS; TRANSDIFFERENTIATION OF EPIDERMAL CELLS

FILE REFERENCE: P07 41494

CURRENT APPLICATION NUMBER: US/09/234,332A

CURRENT FILING DATE: 1999-01-20

NUMBER OF SEQ ID NOS: 16

SOPTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 5

LENGTH: 3138
CLASSIFICATION: 514
PRIOR APPLICATION UNMBER: FR 95/04558
PRICATION NUMBER: FR 95/04558
FILING DATE: 14-APR-1995
PRIOR APPLICATION DATA:
APPLICATION NUMBER: WO PCT/FR96/00560
FILING DATE: 12-APR-1996
ATTORNEY/AGENT INFORMATION:
NAME: Savitzky Esq., Martin F.
REGISTRATION NUMBER: 29,699
REFERENCE/DOCKET NUMBER: 29,699

The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene

Claim 9; Page 13-14; 37pp; English.

New insulin regulator cassette, useful e.g. for treating diabetes, provides specific, glucose-inducible transgenic expression of insulin liver cells.

The construct is used to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorricoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, e.g. this isometry are insulin regulator construct of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an insulin regulator construct comprising a CC glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-1 (IGFBP-1) basal promoter. The construct is used CC to treat or prevent diabetic complications, to regulate insulin CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when CC fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties CC differentiated hepatoma lines and insulin expression in these cells may carbohydrate additional to those provided by secreted insulin, e.g. cinhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors.                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an insulin regulator construct comprising a CC glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-1 (IGPBP-1) basal promoter. The construct is used CC to treat or prevent diabetic complications, to regulate insulin (CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct CC provides stimulation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticois and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when CC fed ad libitum and prevent pathological ketogenesis and ketoacidosis, CC thus inhibiting the long-term complications of diabetes. The properties CC of the construct are essentially specific for hepatocytes and well-CC differentiated hepatoma lines and insulin expression in these cells may CC inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence CC represents a rat insulin regulator construct of the invention
                                                                                                                                                                                                                                                                                               Matches

                                                                             Ş
                                                                                                                                                                                               CC glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene
CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth
CC factor binding protein-1 (IGFB-1) basal promoter. The construct is used
CC to treat or prevent diabetic complications, to regulate insulin
CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to
CC increase fat catabolism and to retard protein catabolism. The construct
CC provides stimulation of insulin expression by glucose (but not other
CC carbohydrates) and glucocorticoids and inhibition by glucagen so that a
CC combination of these effects can maintain nearly euglycaemic conditions
CC in diabetics during short-term fasting, large carbohydrate loads or when
CC fed ad libitum and prevent pathological ketogenesis and ketoacidosis,
CC thus inhibiting the long-term complications of diabetes. The proporties
CC differentiated hepatoma lines and insulin expression in these cells may
CC have effects additional to those provided by secreted insulin, e.g.
CC inhibition of cellular protein degradation, and inhibition, or
CC stimulation of other intracellular hormone receptors. This sequence
CC represents a rat insulin regulator construct of the invention
                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                              in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, e.g. inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence represents a rat insulin-sensitive element of the invention
                                                                                                                                                                                                                                                                                                                                                                                   to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a combination of these effects can maintain nearly euglycaemic conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene promoter and an insulin-sensitive element (ISE) of an insulin-like growth factor binding protein-1 (IGFBP-1) basal promoter. The construct is used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Glucose response element; GIRE; liver pyruvate kinase; LPK; ds; IGFBP-insulin-sensitive element; ISE; basal promoter; hyperglycaemia; insuliinsulin-like growth factor binding protein-1; hypoglycaemia; glucose; fat catabolism; protein catabolism; carbohydrate; glucocorticoid; rat;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New insulin regulator cassette, useful e.g. for treating diabetes, provides specific, glucose-inducible transgenic expression of insulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   17-APR-2003

The invention relates to methods for predicting toxic effects of compounds or the progression of these toxic effects by determining the global changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or cells. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the hepatotoxicity of a compound, comprising detecting the level of expression in a tissue or cell sample exposed to the compound of two comore genes listed in the specification, where differential expression the genes is indicative of at least one toxic effect or progression. The methods utilise a set of at least two probes (on a solid CC cell. The methods utilise a set of at least two probes (on a solid CC support in kit form), where each of the probes comprises a sequence that specifically hybridises to a gene listed in the specification, a computer CC system comprising a database containing information identifying the CC expression level in a tissue or cell sample exposed to a hepatotoxin of a CC set of genes comprising at least two genes listed in the specification, a computer CC and a user interface to view the information used to present information cC clisted in the specification. The method is useful for elucidating global CC listed in the specification and for identifying toxicity markers in CC tissues or cell exposed to a known toxin. The genes may be used as CC toxicity markers in drug screening and toxicity assays. The genes and CC gene expression information may be used as diagnostic markers for the prediction or identification of the physiological state of tissue or cell caracterised by centrilobular necrosis and steatosis. The present CC characterised by centrilobular necrosis and steatosis. The present componed to a supposed to a hepatotoxicity as gene which is differentially expressed in response to a hepatotoxic agent toxicity segment is differentially expressed in response to a hepatotoxic agent toxicity which is differentially expressed in response to a hepatotoxic agent toxicity which is differentially expressed in response to a hepatotoxic agent toxicity which is differentially expressed in response to a hepatotoxic agent toxicity which is differentially expressed in response to a hepatotoxic agent toxicity is constituted in the present toxicity is differentially expressed in response to a hepatotoxic agent toxicity is constituted in the specification of the present toxicity is differentially expressed in response to a hepatotoxic agent toxicity is differentially expressed in respon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC of a tissue or cell sample exposed to the compound, and comparing the CC of a tissue or cell sample exposed to the compound, and comparing the CC gene expression profile to a database comprising SEQ ID 1-4925, where CC differential expression of the gene indicates at least one toxic effect. The method is useful for predicting at least one toxic effect. CC compound, identifying an agent that modulates the onset or CC compound, identifying an agent that modulates the onset or CC progression of a toxic response, predicting the cellular pathways that a CC compound modulates in a cell, and identifying an agent that modulates at CC compound modulates in a cell, and identifying an agent that modulate at the conset or CC present invention using a database of genes having liver toxin-induced CC differential expression, are useful in identifying toxicity markers in CC liver tissues or cells for drug screening and toxicity assays. Note: The sequence data for this patent did not form part of the printed consecution, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

The method comprises preparing a gene expression profile of a tissue or cell sample exposed to the compound, and comparing the gene expression profile to a database comprising data or information on the Tox mean and non-Tox mean value. The method is useful for predicting or identifying at least one toxic effect, particularly hepatotoxicity, of a test or unknown compound. The genes listed in the specification are useful as diagnostic or toxicity markers for the prediction or identification of the physiological state of tissue or cell sample that has been exposed to a compound, or to identify or predict the toxic effects of a compound or an agent. These may also be used as markers for monitoring toxicity progression or for drug screening. The present sequence represents a primary rat hepatocyte toxicity modelling related gene sequence from the present invention.

                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                           REFERENCE REFERE
                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel method of predicting at least one toxic CC effect of a compound. The method comprises a gene expression profile of a CC tissue or cell sample exposed to the compound, and comparing the gene CC expression profile to a database comprising at least part of the data or information given in the specification. The methods are useful for CC predicting at least one toxic effect of a compound, predicting the renal CC confictive of a compound, or identifying toxicity markers in tissues or CC cells exposed to known renal toxin. The genes are useful as toxicity CC markers in drug screening and toxicity assays, in monitoring disease or CC physiological states, or disease progression. This polynucleotide crepresents a rat DNA sequence relating to the toxic effect database CC described in the specification. NOTE: The sequence data for this patent CC calls exposed to free printed specification, but was obtained in CC electronic format directly from the World Intellectual Property
                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             agent will induce various specific kidney pathologies, such as nephritis, kidney necrosis, glomerular and tubular injury, or focal segmental glomerulosclerosis. The methods are useful for determining the similarity of a toxic response to one or more individual compounds and for predicting or elucidating the potential cellular pathways influenced, induced or modulated by the compound or test agent. The kit is useful for predicting or modelling the toxic response of a test compound, for monitoring the progression of renal disease states, for identifying genes that show promise as new drug targets and for screening known and newly designed drugs. This sequence corresponds to a gene marker used in the method of the invention. (Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences).

                                                                                             Ś
                                                                                                                                                                                                  The present invention describes a method of screening a test agent for chepatotoxicity. The method comprises: (a) providing a test cell population comprising a cell capable of expressing one or more nucleic acid sequences selected from the group consisting of RISKWARKER 1-8 and INJURYWARKER 1-10; (b) contacting the test cell population with a test agent; (c) measuring expression of one or more of the nucleic acid sequences in the test cell population; (d) comparing the expression of the nucleic acid sequence in the test cell population to the expression of the nucleic acid sequence in an reference cell population comprising at least one cell whose exposure status to a hepatotoxic agent in known; and (e) identifying a difference in expression levels of the RISKWARKER or INJURYMARKER sequences, if present in expression levels of the RISKWARKER certain cell population. The method is useful for identifying a hepatotoxic agent. The present sequence is given in the exemplification of the patotoxic agent. The present sequence is given in the exemplification
                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatcocllular carcinoma and metastatic liver carcinoma in a patient. The method is useful for identifying expression profiles which serve as useful diagnostic markers as well as markers that can be used to monitor disease states, disease progression, drug toxicity, drug efficacy and drug metabolism. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

a liver cancer in a patient. The method involves detecting in a biological sample obtained from the patient aberrant expression of a gene encoding an insulin-like growth factor binding protein (IGRBP). The method is useful for detecting the presence or diagnosing the risk of a liver cancer or for screening agents in a patient. The agent is useful for the manufacture of a medicament for treating and/or preventing liver cancer. The present sequence represents a human IGFBP-1 polypeptide encoding genomic DNA (GenBank Accession No. M74587)
Sequence 6128 BP; 1504 A; 1497 C;
                                                                                                 The invention relates to detecting the presence or diagnosing a liver cancer in a patient. The method involves detecting in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                AAH57161 to AAH57576 represent cell and tissue specific polynucleotide sequences (I). (I) can have cytostatic, immunomodulatory and neuroprotective activities, and can be used in gene therapy. (I) and proteins (II) encoded by then are used in high throughput screening assays to select DNA molecules, RNA molecules, peptide nucleic acids, mimetics, peptides, proteins, agonists, antagonists, antibodies or their fragments, immunoglobulins, inhibitors, drug compounds and pharmaceutical agents. Expression of (I) in a sample indicates the differentiation of embryonic stem cells into a tissue selected from brain, heart, kidney, liver, lung, skeletal muscle or pancreatic tissues. (I) and (II) are used to produce an expression profile that defines a metabolic or developmental process, treatment, condition, disease or disorder. The gene profile can be used for diagnosis, prognosis or monitoring of treatments and for investigating a predisposition to a disorder where the gene is associated with a cancer, immunopathology or neuropathology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Local Similarity

          The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPR) gene promoter and an insulin-sensitive element (ISE) of an insulin-like growth factor binding protein-1 (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagon so that a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Glucose response element; GIRE; liver pyruvate kinase; LPK; ds; IGFBP: insulin-sensitive element; ISE; basal promoter; hyperglycaemia; insulin-like growth factor binding protein-1; hypoglycaemia; glucose; fat catabolism; protein catabolism; carbohydrate; glucocorticoid; rat; glucagon; euglycaemia; diabetes; fasting; ketogenesis; ketoacidosis; hepatocyte; hepatoma; cellular protein degradation; antidiabetic; intracellular normone receptor; insulin regulator construct; anabolic.
                                                                                                                                                                                                                 New insulin regulator cassette, useful e.g. for treating diabetes, provides specific, glucose-inducible transgenic expression of insuliver cells.
                                                                                                                                                                                                                                                                                                                                                                                      11-OCT-2000;

Search completed: September 1, 2005, 00:34:43 Job time : 288.304 secs Query Match 18.9%; Score 51; DB 6; Length 51; Best Local Similarity 100.0%; Pred. No. 1.7e-06; Matches 51; Conservative 0; Mismatches 0; Indels in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, e.g. inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence represents a rat glucose response element of the invention Sequence 51 BP; 6 A; 18 C; 17 G; 10 T; 0 U; 0 Other; 0; Gaps 0;

The invention relates to an insulin regulator construct comprising a glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene

Claim 9; Page 14; 37pp; English.

New insulin regulator cassette, useful e.g. for treating diabetes, provides specific, glucose-inducible transgenic expression of insulin in liver cells.

WPI; 2002-674190/72.

The construct C provides stimulation of insulin expression by glucose (but not other C carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when C fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties C of the construct are essentially specific for hepatocytes and well-c differentiated hepatoma lines and insulin expression in these cells may care effects additional to those provided by secreted insulin, e.g. C stimulation of other intracellular hormone receptors.                                                                                                                                                                                                                                                                                                                                                       Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an insulin regulator construct comprising a CC glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-l (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin (CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to cincrease fat catabolism and to retard protein catabolism. The construct CC provides stimulation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when CC thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-conditions inhibition of cellular protein degradation, and inhibition, or construct of cellular protein degradation, and inhibition, or construct are at insulin regulator construct of the invention

to treat or prevent diabetic complications, to regulate insulin production, to modulate hyperglycaemia (without severe hyperglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other carbohydrates) and glucocorticoids and inhibition by glucagen so that a combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when fed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties of the construct are essentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, e.g. inhibition of cellular protein degradation, and inhibition, or stimulation of other intracellular hormone receptors. This sequence
                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                 The invention relates to an insulin regulator construct comprising a CC glucose response element (GIRE) of a liver pyruvate kinase (LPK) gene promoter and an insulin-sensitive element (ISB) of an insulin-like growth cCC product on insulin-sensitive element (ISB) of an insulin-like growth cCC production, to modulate hyperglycaemia (without severe hypoglycaemia), to increase fat catabolism and to retard protein catabolism. The construct provides stimulation of insulin expression by glucose (but not other cC carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when cf ed ad libitum and prevent pathological ketogenesis and ketoacidosis, thus inhibiting the long-term complications of diabetes. The properties confictions inhibition the sesentially specific for hepatocytes and well-differentiated hepatoma lines and insulin expression in these cells may call the confiction of cellular protein degradation, and inhibition, or similation of their intracellular hormone receptors. The invention relates to an insulin regulator construct comprising a CC glucose response element (GIRE) of a liver pyruvate kinase (IPK) gene CC promoter and an insulin-sensitive element (ISE) of an insulin-like growth CC factor binding protein-1 (IGFBP-1) basal promoter. The construct is used to treat or prevent diabetic complications, to regulate insulin CC production, to modulate hyperglycaemia (without severe hypoglycaemia), to cincrease fat carabolism and to retard protein catabolism. The construct CC provides stimulation of insulin expression by glucose (but not other CC carbohydrates) and glucocorticoids and inhibition by glucagon so that a CC combination of these effects can maintain nearly euglycaemic conditions in diabetics during short-term fasting, large carbohydrate loads or when CC fed ad libitum and prevent pathological ketogenesis and ketoacidosis, the construct are essentially specific for hepatocytes and well-CC differentiated hepatoma lines and insulin expression in these cells may have effects additional to those provided by secreted insulin, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
